

Universal Tan's
Spray Tan Commandments:

1. Shave or wax 24-48 hours prior to your spray tan.
2. Use a non-oil based exfoliant the night before or morning of.
3. Arrive to appointment with no moisturizer, makeup, or deodorant.
4. Bring loose-fitting, dark clothing and sandals to put on after your spray tan.
5. No showering, sweating, or getting your skin wet before it's time to rinse off your solution.
6. If you smudge the solution before rinsing, do not try to fix it; it should blend together when you rinse off your solution.
7. Rinse your tan off without using any soaps or cleanser and pat your skin to dry instead of rubbing.
8. After 24 hours, moisturize every day twice a day.
9. Avoid using products with mineral oil and sulfates to prolong your tan.
10. Make sure to still apply sunscreen as spray tans do not protect from UV rays.

YOUR GUIDE TO THE

*Perfect
Spray Tan*

HOW TO ACHIEVE THE PERFECT SPRAY TAN:

PREPARE

The first steps to getting the perfect sunless tan happen before you even get to the tanning salon.

- Shower, shave, and exfoliate your skin before you arrive.
- Only use moisturizer and lotions formulated for spray tanning.
- Avoid wearing perfumes, makeup, and deodorant.
- Wear loose-fitting dark clothing to your session.

PROTECT

Your sunless tan will last up to 7 days.

- Wait at least 1-3 hours with a rapid solution and at least 24 hours for other solutions before bathing, swimming, or coming into contact with water.
- Avoid engaging in activities that cause you to sweat prior to rinsing.
- Moisturize daily with a post-sunless product.

PROLONG

Proper skin care before, during and after sunless tanning will extend the life of your tan; up to 7 days.

- Prolong your spray tan with a specially formulated, quality sunless tan extender and body wash.

YOUR GUIDE TO THE *Perfect Shade*

With spray tanning, you get a natural looking tan, **perfectly matched to your skin tone in just one visit.**

A spray tan is a mist that is sprayed onto your body by one of our certified spray tan technicians OR our VersaS-pa Pro booth. The mist contains DHA, an ingredient derived from plants, which reacts with the amino acids in your skin to temporarily turn it into that golden tan color we all love.

WHAT WE OFFER:

Universal Tan we offers two different kinds of spray tanning:

1. Handheld airbrush spray tanning using Norvell products.
2. Booth spray tanning with the VersaSpa at our Lakeland location and Mystic at our Spring Hill location.

FAQs

What is a sunless spray tan?

A sunless tanner contains the ingredient DHA (dihydroxyacetone) that reacts with the outer layer of the skin turning it a brownish tan color. When dissolved in water, DHA produces a colorless solution. Many self tanners have bronzers added so that the product goes on with a tan shade.

What is an airbrush spray tan?

Tanning occurs when the skin produces pigment to protect itself from UV rays and permanent skin damage. In airbrush tanning, the tanning solution is applied by a technician using a compressor and airbrush. These tanning solutions contain the active ingredient DHA that reacts with the outer layer of skin to produce a bronzing effect, similar to what a traditional tan does.

How long does a spray tan take?

With practice, a single airbrush tan application can take as little as 12 minutes or so. Factor in the drying time of about 5 or 10 minutes. For a spray tan, allow about 5 minutes for the application.

What is the drying time of a spray tan?

The drying time after a sunless spray tan session depends on the solution. Some contain additional ingredients to support other cosmetic objectives that may add to drying time.

Does a spray tan offer sun protection?

No. While the skin in a sunless tan is brown, this is not due to melanin pigmentation. Melanin does protect the skin from UV.
